HOW TO CONDUCT FINALS
Using the 2012-2014 National Standard
Three-Position Air Rifle Rules
By Gary Anderson, Chairman, National Three-Position Air Rifle Council
Information about Finals and Their Use in Junior Competitions

Finals have changed the sport of Shooting so that it is becoming more and more like other Olympic sports where the best athletes finish sports contests together in head-to-head competitions in front of spectators and television audiences. This article discusses finals and the current status of finals in Shooting. It follows these discussions with instructions on how to conduct junior 3-position air rifle finals according to the 2012-2014 National Standard Three-Position Air Rifle Rules.

A Short History of Shooting Finals

A “final” in a sports event is the last stage of competition where the best athletes from preliminary or qualification stages finish the competition in a head-to-head contest. Finals are meant to achieve maximum spectator, media and television impact. Finals were introduced in Shooting in 1986 and successfully brought the sport closer to most other Olympic sports that had used finals for decades. Events in those sports begin with qualifying or preliminary competitions that determine which athletes
QUALIFICATIONS. A preliminary stage within a competition event. The "qualification" in Shooting is the first stage where everyone entered in the event fires a prescribed course of fire while competing for rankings and a place in a final.

FINAL. The last stage in a competition event where medal winners are decided. The "final" in Shooting is the stage where the athletes with the best scores in the qualification complete the event to decide the medal winners.

In the early 1980s, the ISSF (International Shooting Sport Federation) recognized that Shooting could not remain as an Olympic sport if it did not change these practices and become more spectator and media friendly. In 1986, the ISSF adopted Shooting’s first finals. By 1990, electronic targets were used in most international competitions to give Shooting instant scores that were not subject to long backroom evaluations.

In Shooting event finals, all athletes shot a regular course of fire as a "qualification" that is scored in whole numbers. The top eight finishers advanced to the final. In the original ISSF finals format, which is still used in 3-position air rifle, qualification scores were carried forward to the final. The eight finalists then fired ten additional shots, one-at-a-time, that are scored in tenth ring values. Finalists’ qualification and final scores were added together to determine rankings. LCD projectors and computer results software allowed scores to be displayed for spectators. When the last shot was fired, winners were known and recognized, just like other sports have been able to do for many decades.

Finals brought Shooting closer to other Olympic sports by allowing the best athletes to finish each event in a format that keeps fans involved and facilitates television productions. ISSF video productions of World Cup and World Championship finals are on YouTube at http://www.youtube.com/issfchannel. In 2012, these productions also were shown on national television networks to over 400 million people in more than 60 countries.
Starting in 2013, the ISSF eliminated the last major difference it has with other Olympic sports. Olympic sports either have had or have recently adopted competition formats where each stage of competition is separate. Athletes in each stage start from zero and results from previous stages are not carried forward. Preliminary stages determine who advances to the next, but scores do not carry forward. ISSF finals rules for the new Olympic cycle now have finalists start from zero, eliminate the lowest ranking shooters during the last shots of each final and end with two-person duels for gold and silver medals. This format is now used in all World Cups and World Championships and Olympic competitions. Since qualifying scores are longer carried forward, the number of shots in rifle and pistol finals was increased from ten to 20 shots in single position events and to 45 shots in 3-position finals. In the new 3-position finals, finalists shoot 15 shots in each position and the position order has been changed to kneeling-prone-standing (see illustration on right).

**Why Have Finals in Junior Competitions?**

When Shooting finals were first introduced 25 years ago, there was controversy over whether juniors should shoot finals. However, after trying finals in several major junior competitions, it was clear that junior shooters readily and enthusiastically adapted to finals. Juniors and their coaches want to shoot what world and national elites shoot. Finals make junior championships spectator events; this is especially appealing to parents. Finals showcase the skills of the best juniors. It is a big honor for juniors to “make the final” and have the experience of competing in front of an audience. Finals bring junior shooting closer to other youth sports. With finals, young shooters can experience the same thrills and excitement that young athletes experience in shooting a winning free throw or kicking the winning goal.

Almost all major junior 3-position air rifle championships now use finals to decide individual winners. Whether regional and local junior matches include finals depends upon how much time is available and how the matches are structured. Many junior matches have multiple relays where it is not possible for the best shooters on early relays to wait for a final at the end of a long competition. When having a final end a competition is not practical, special rules make it possible to shoot min-finals for the top eight shooters at the end of each relay and then to count the finals scores only from the shooters who end up with the eight highest qualification scores.

**The New ISSF 50m 3-Position Rifle Final**

Today’s ISSF final for the 50m 3x20 and 3x40 events is a 3-position final that follows these steps:

- **Finalists start from zero; scores are cumulative**
- **Kneeling preparation and sighting, 5 min.**
- **Presentation of finalists**
- **Kneeling Record, 3x5 shots, 200 sec. per series**
- **Prone changeover and sighting, 7 min.**
- **Prone Record, 3x5 shots, 150 sec. per series**
- **Standing changeover and sighting, 9 min.**
- **Standing Record, 2x5 shots, 250 sec. per series, followed by 5 single shots, 50 sec. per shot**
- **Eliminations** during standing occur after 10 shots (2) and shots 41-42-43-44. The top two shooters remain to decide the gold medal on shot #45.
Junior Shooting competitions should include finals when they can be worked into the schedule, both because juniors like them and because juniors who want to shoot in college or for positions on the national team need lots of finals experience.

**Conducting Junior Finals on Paper Targets**

Finals at national and international levels are now almost always fired on electronic scoring targets (EST) where instant, final scores and rankings are displayed. A few junior matches have access to ranges with ESTs, but finals in most junior matches must be shot on paper targets where special adaptations are necessary.

With paper targets, instant, official scores are not available after each shot. However, spotters behind each finalist with a spotting scope can look at each shot and call out estimated shot values to be displayed for coaches and spectators. Paper targets must be scored after the final. There are two scoring options. They can be scored by hand in whole numbers or an Orion Electronic Scoring System can be used to score all shots in tenth ring values (http://www.orionscoringsystem.com/orion/Home.aspx).

Finals spotters who are familiar with tenth ring scoring can estimate tenth ring values with reasonable accuracy. However, everyone at the final needs to understand that official scores will vary from estimated scores by a point or two when whole numbers are used or by a few tenths if Orion scoring is used.

With either paper target scoring method, estimated shot scores should be posted on a scoreboard or in a spreadsheet that can be projected on a wall or screen. Immediately after the final is finished and guns are cleared and grounded, targets must be retrieved and scored. It is important to do this quickly so scores can be displayed and winners recognized as soon as possible. Orion scoring can produce results in less than a minute, but the rules do call for a two-minute challenge period. Then official results can be announced.

Because of difficulties inherent in conducting shoot-offs, there are no tie-breaking shoot-offs when finals are shot on paper targets. The higher final score decides ties in finals on paper targets.
Summary of 3-Position Finals Rules

The 9th Edition 2012-2014 National Standard Three-Position Air Rifle Rules released this past September contain some changes in how 3-position air rifle finals are conducted. Previous rules were modeled after previous ISSF finals rules that were in effect since 1986. Rules for finals in the new 3-position air rifle rules combined those rules with some changes to make finals more suitable for junior shooting. The National Three-Position Air Rifle Council discussed the new ISSF finals format that has finalists start from zero, but the Council decided to continue to use the older, traditional final for junior finals.

Basic steps for conducting finals according to current 3-position air rifle rules are:

Schedule. Finals are scheduled to start at a specific time. The finals start time is when commands for the first record shot start. Finalists must report to the Chief Range Officer at least 20 minutes before the start time.

Control. A Chief Range Officer (CRO) is responsible for conducting the final. A separate Announcer may be used to introduce finalists and comment on their scores or the CRO may do this.

Targets. If the final is shot on paper targets, eight volunteers should be recruited to spot and call estimated shot values. If the final is shot on EST, one or two Range Officers may be needed to confirm when finalists fire their shots.

Squadding. Each finalist is assigned to one of eight firing points according to qualification scores, starting with the highest-ranking qualifier on the left.

Firing Position. Finals are shot in the standing position.

Scoring. Qualification scores are still carried forward in junior three-position air rifle. Finals must be scored in tenth ring scores if EST or Orion scoring is available. Final rankings for the top eight athletes are decided by the totals of the qualification and final round scores.

Call to the Line. Finalists must be called to their firing points 12 to 15 minutes before the start time. Finalists must then ground or bench their rifles and turn to face spectators.
**Presentation.** Finalists must be introduced by announcing their names, club or team names and qualification scores. Introductions start with the finalist on the right in eighth place and end with the finalist in first place.

**Preparation and Sighting.** After the presentation, the CRO commands finalists to take their positions. After a short pause, the CRO will give commands to start an eight (8) minute combined preparation and sighting stage. During this stage, finalists must finish preparing their positions and may fire unlimited sighters.

**30 Second Pause.** After the STOP command at the end of the sighting stage, there is a 30 second pause. When ESTs are used, targets must be reset for record firing.

**Record Firing Procedure.** For each record shot, the CRO gives a LOAD command, pauses 10 seconds, and then commands START. There is no longer any countdown, but there must be a 10 second pause to give the athletes time to load and assume their positions.

**10 Second Warning.** After 35 seconds, the CRO will give an audible signal to warn finalists that 10 seconds remain or the CRO may command 10 SECONDS.

**STOP and Commentary.** After 45 seconds or after all eight finalists fire, the CRO commands STOP. The announcer should then give 15-20 seconds of commentary on the scores and ranking (EST) or announce the scores (paper target score estimates).

**Final Continuation.** The CRO and Announcer continue this record firing procedure and commentary until all ten shots are fired.

**Paper Target Conclusion.** The CRO must clear the line and have targets retrieved and scored. As soon as scoring is finished, announce the scores and recognize winners.

**EST Conclusion.** Immediately after the tenth shot, any ties for the first three places only must be shot off. When all final rankings are decided, the Announcer must recognize medal winners.
**Tips to Prepare For Finals**

There are several measures match sponsors can take to ensure excellent finals.

**CRO Script.** The *National Standard Rules* now provide a detailed finals script for CROs to use in calling the line. The script begins on page 57 of the rulebook. It includes both formal commands and an explanation of specific rules to apply at each step in the final. Anyone who will work as a finals CRO really must prepare a copy of this script and follow it precisely.

**Finals Range.** Designate eight adjacent firing points for the final. Select points with sufficient space behind them for spectator chairs or bleachers. Place firing point designations “1” through “8” on those points.

**Finals Attendance.** Encourage all shooters in the competition as well as their parents and friends to attend the final.

**New Finalists.** When finalists report, ask if any of them have not shot a final before. Give new finals shooters a short briefing explaining how they will be called and introduced, the preparation and sighting period and the shot-by-shot firing procedure.

**Finalist Introductions.** Encourage all finalists to acknowledge spectators when they are introduced before the final or recognized at the end of the final. Interaction between athletes and spectators is part of what makes finals interesting.

**Spectator Behavior.** If the final is new to spectators, provide a brief explanation to them before it starts. Make sure they understand that clapping and cheering for the finalists is desired.

**The Future of Finals in the USA**

Most coaches and junior shooters are quite satisfied with how finals are conducted under the present 3-position air rifle rules, that is, with 3x10 or 3x20 scores being carried forward and finals scores added to them to produce official score totals and rankings. On the other hand, ISSF finals with qualifiers starting at zero, eliminations and two-person duels at the end are here to stay. They are now used in all ISSF Championships including Americas Championships, World Cups, World Championship and the Olympics. That means they are also used in high-level national competitions. Many juniors will want to shoot what national and international elite shooters shoot so we can expect some future junior championships to begin experimenting with the newest finals format.

Nicco Campriani, Italy, acknowledges spectators and a worldwide TV audience when he is introduced before the 2012 Olympic Games 50m 3-position rifle final. He went on to win the gold medal. Building sympathetic relationships between athletes and fans is part of making finals interesting.
